Re: Spruce Street Water Main Project

Preliminary work for construction of the new water main along Spruce Street in the downtown business core began on Tuesday, October 25, 2011. A 12-inch control valve was inserted in the existing 12-inch main on 3rd Street in order to proceed with the remaining construction elements of the new main.

Other preliminary work includes the installation of additional control valves along Spruce at 1st and at 3rd Street intersections on Wednesday, November 2, 2011. The City does not foresee the need for further outages associated with additional preliminary work.

Installation of 12-inch main along Spruce Street from 1st to 4th streets is expected to continue in the following year, 2012.
