

The building housing the City Hall & Police Station is 70 years old and was originally constructed to store building materials. It was never meant to house the business functions associated with a City Hall and was definitely not intended to accommodate a police department and emergency management functions. The conditions of

our current City Hall & Police Station building are well below what would be expected from a facility housing public safety, emergency management or other critical municipal operations. Please use this page as a reference to all activities related to the project as we plan for it's future replacement.
